GROUND LAUNCHED CRUISE MISSILES

The United States Air Force Ground Launched Cruise Missile has been deployed in Europe since 1982 to counter the threat from Soviet intermediate range nuclear missiles.

Over the years GLCM has been highly visible evidence of the North Atlantic Treaty Organization's commitment to the defense of Europe. The strength

of this commitment is a direct result of the 1987

Intermediate-Range Nuclear Forces Treaty, a landmark agreement that will result in significant reductions in the nuclear forces of East and West. General Dynamics takes pride in having been associated with the United States Air Force in the development and successful deployment of the GLCM system, and the successful accomplishment of both elements of the mission — deterrence and
